# Is Recreational Traffic Taking Over Your Bandwidth?

Even if you're currently using Deep Packet Inspection, new applications and services like Peer-to-Peer can quickly send bandwidth usage spiraling out of control – and degrade network performance.

Now there's a new approach: Deep *Flow* Inspection. Procera's PacketLogic looks deep into network traffic to accurately identify hundreds of traffic types – even encrypted and tunneling applications – allowing you to manage and prioritize your network traffic easily and efficiently.

PacketLogic gives you a comprehensive view of your network with the ability to drill down to the individual user, department or application level. You can easily throttle back bandwidth-intensive services and applications to maintain quality of service for all users. And that's only the beginning.

Learn more about how Packet-Logic can help you take back control of your network. Visit our web site or call us today for more information.
